

BYCURE

**Product name: Sepiwhite MSH Pearls**

**Code: R101771**

**Packaging:** Dropper bottle, 15 ml

**Class:** Face/body anti-blemishes drops

**Function:** Depigmenting action face and body drop serum. Multistep action, technological advanced formula, with a balanced mix of whitening active principles, which act on the different stages of melanin production, obtaining fastest and long lasting results

**Active ingredients and their function:**

**Glutathione:** antioxidant skin protection against damages caused by ultraviolet radiation. Chelation of ions Fe and CU, it reduces the initial stage of melanogenesis.

**Undecylenoyl phenylalanine (Sepiwhite® MSH complex):** inhibitory action complex on prime synthesis of melanin. The complex affects the production of melanosomes, cell bags that will contain melanin and on the tyrosinase enzyme, used for the pigment production.

**Gatuline Complex®:** whitening action complex. It acts on the central stage of the melanin production, actively reducing the activity of the tyrosinase enzyme.

**Ivy extract®:** anti-reductase action, it acts concretely on the final melanogenesis stage, reducing the pre-melanin formation within melanocytes

**Phytic acid:** anti-oxidant action, it effects the melanogenesis final stage, reducing the pre-melanin formation within melanocytes

**Skin type treated:** hyperpigmentated skins (photoageing, photoexposed scars)

**Home use directions:** After a proper cleansing, apply, when needed, on the areas affected by hyperpigmentation (face, neck, décolleté, body). Massage until completely absorbed, then proceed to the application of the specific face, hands or body product.

**INCI:**

aqua, C12-15 alkyl benzoate, C12-13 alkyl ethylhexanoate, glyceryl stearate, prunus amygdalus dulcis oil, glycerin, cetareth-20, butylene glycol, butyl
